PROMOTING HUMAN-CENTERED DESIGN

***Passion and reason drive the human soul—
it's the combination of both heart and mind
that feeds the fire of human endeavor.***

RS&H understands that the compassionate application of scientific discovery fuels the health and science industry. What better inspires the continuous pursuit of knowledge than the deep desire to improve the health of a loved one?

Our specialized teams of laboratory and healthcare planners, architects, interior designers, engineers, and consultants help clients provide healing environments and foster an engaged workforce. We combine advanced technology and process-driven operations with creative innovation, bridging these diverse elements through human-centered design.

RS&H SPECIALIZES IN FACILITY SOLUTIONS FOR:

- » Academic Teaching & Research
- » Research, Development, & Production
- » Inpatient & Outpatient Healthcare
- » Clinical Research & Treatment
- » Diagnostics & Imaging

HEALTH

Evidence-based design guides our principles for improving health through integrated research and design. We focus on creating environments that enhance the healthcare experience through patient-focused strategies, operational efficiencies, cultural and community-based considerations, as well as technological advancements. Through this approach, we create comprehensive solutions unique to each client that improve outcomes for patients and families.

Through collaborative effort, our designs enhance environments for healing, as well as streamline staff and equipment processes. As the industry evolves, our passion grows for helping clients provide the best care for patients.

SCIENCE

Success in the science industry hinges on two factors—open collaboration of disciplines to achieve a common goal and refining an effective process to advance a product or technology. One is exchanged freely to advance knowledge, while the other is securely guarded to grow market share.

At RS&H, we understand the necessity of both components and work with industry leaders to create environments that stimulate innovation and promote efficiency. Through strategic facility planning, we design interactive environments for enhancing the connections that advance basic research. By following the process of value stream mapping to maximize lean procedures, our designs also can advance the business of science.

Whether we are designing for academic institutions, governmental agencies, or private research, development, and production companies, RS&H will advance your goals with aligned facility solutions.
