

The FL Complete Streets website was created as a focal point for educating both industry insiders and the wider community about the importance of incorporating multi-modal considerations into transportation projects.

Serve as a central hub for a greater Complete Streets marketing campaign

Focal point for educating both industry and the wider community

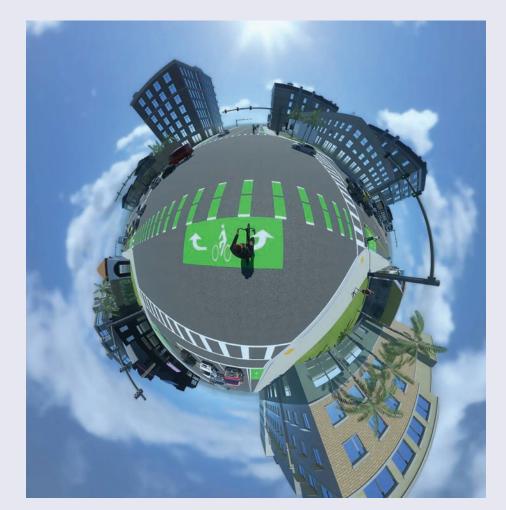

Prioritize the incorporation of Complete
Street principles into every project

Frequently utilized by FDOT staff to discuss improvement state-wide

 Originally unveiled at 2021 SASHTO
Conference and viewed as resounding accomplishment

Complete Street Enhancements

ements help manage the speed of the street and make it more inviting for bicyclists and pedestria 'o use. The images below are just a few examples of enhancements that apply to the Rural Town context. Many other encements and combinations of enhancements can also be applicable. The techniques shown below can also be applied to other context classifications. See the Complete Streets Matrix button below or FDM Chapter 202 for more information

Complete Streets Matrix

Additional Example

This example focuses on speed management techniques to improve safety for pedestrians and vehicles, while also adding in a space for bicyclists.

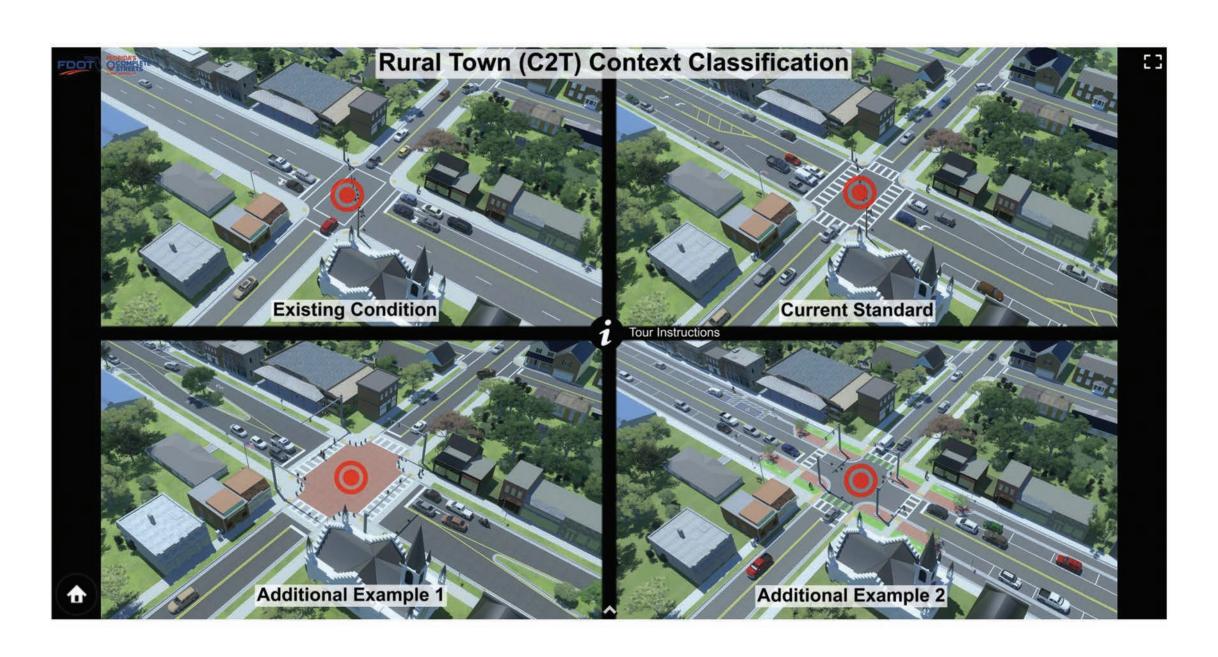

Use the slider to easily notice the differences between the Existing Condition and Current Standard. Pavement changes have been highlighted for easier identification
